

Amendments to the Claims

Please amend claims 1, 16 and 25. The currently pending claims after amendment are listed below.

1 1. (Currently Amended) A method of providing souvenir images to event site customers,
2 comprising:

3 capturing motion video data during an event;

4 automatically generating a plurality of images of different event site locations within an
5 event site from said motion video, wherein each image of said plurality of images is associated
6 with a respective one of said event site locations, wherein each said event site location is occupied
7 during said event by a respective discrete subset of said event site customers, each said event site
8 customer occupying only a single respective event site location of said different event site
9 locations:

10 receiving, in an automated interactive device, an input from a customer specifying a
11 desired event site location, said receiving step being performed after said step of capturing motion
12 video data;

13 responsive to said step of receiving a user input, automatically displaying to the customer
14 in said automated interactive device at least one image associated with the desired event site
15 location; and

16 responsive to receiving in said automated interactive device a customer confirmation,
17 automatically providing the at least one image to the customer.

2. (Cancelled)

1 3. (Original) The method of claim 1, wherein the at least one image comprises an electronic
2 image.

1 4. (Previously Presented) The method of claim 1, wherein the motion video data comprises a
2 scoreboard display signal.

1 5. (Previously Presented) The method of claim 1, wherein the motion video data comprises a
2 television broadcast signal.

1 6. (Original) The method of claim 1, wherein the at least one image comprises a video clip.

7 - 8. (Cancelled)

1 9. (Original) The method of claim 1, further comprising receiving money from the customer.

1 10. (Original) The method of claim 1, wherein receiving desired location information from
2 the customer comprises receiving a seat number from the customer.

11-12. (Cancelled)

1 13. (Previously Presented) The method of claim 1, wherein providing the at least one image
2 comprises:

3 receiving an electronic mail address from the customer; and
4 transmitting the first image to the electronic mail address.

1 14. (Previously Presented) The method of claim 1, wherein providing the at least one image
2 comprises:

3 printing the at least one image.

1 15. (Previously Presented) The method of claim 1, wherein providing the at least one image
2 comprises:
3 writing the at least one image onto a signal bearing media.

1 16. (Currently Amended) A system for providing souvenir images, comprising:
2 a selection input device adapted to receive a desired location within an event site from a
3 customer;
4 a camera adapted to capture motion video data during an event for automatically generating
5 a plurality of images of different locations within said event site, wherein each image of said
6 plurality of images is associated with a respective one of said locations within said event site,
7 wherein each said location within said event site is occupied during said event by a respective
8 discrete subset of customers attending said event, each said customer attending said event
9 occupying only a single respective one of aid locations within said event site;
10 an image database for storing image data from said motion video data;
11 a processor adapted to automatically correlate the desired location within said event site
12 received from a customer at said selection input device with at least one image associated with the
13 desired location within said event site, wherein the desired location is received from the customer
14 at said selection input device and correlated by said processor with the at least one image after
15 said camera captures said motion video data; and
16 an image delivery apparatus adapted to automatically provide the at least one image
17 associated with the desired location to the customer responsive to customer input of a desired
18 location within said event site to said selection input device.

1 17. (Original) The system of claim 16, wherein the image delivery apparatus comprises a
2 kiosk.

1 18. (Original) The system of claim 17, wherein the image delivery apparatus comprises a
2 printer operably connected to the kiosk.

1 19. (Original) The system of claim 17, wherein the image delivery apparatus comprises an
2 optical disk writer operably connected to the kiosk.

1 20. (Original) The system of claim 16, wherein the selection input device comprises at least
2 one of a touch sensitive monitor and a keypad.

1 21. (Original) The system of claim 16, wherein the image delivery apparatus comprises a
2 server computer operably connected to a computer network.

1 22. (Original) The system of claim 16, further comprising a stadium display unit operably
2 connected to the camera, the stadium display unit adapted to display the at least one image to a
3 plurality of event site customers.

1 23. (Original) The system of claim 16, wherein the image comprises at least one of: a video
2 clip, a photograph, a digital photograph, and a digital video clip.

1 24. (Previously Presented) A system adapted to provide souvenir images to event site
2 customers, comprising:

3 a camera adapted to capture a plurality of images of different locations within
4 an event site during an event;

5 a sensor that automatically correlates each image of the plurality of images with a
6 respective discrete subset of a plurality of seat locations at said event site;

7 an automated kiosk for interactive use by a customer after said camera has captured said
8 plurality of images, comprising:

9 an automated document reader that receives a physical document evidencing an assigned
10 seat location from a customer, said automated document reader reading data recorded on said
11 physical document to obtain said assigned seat location, said data being unique to said customer;

12 a display that automatically displays an image in the plurality of images associated with the
13 assigned seat location responsive to obtaining the assigned seat location using data read by said
14 document reader;

15 a payment receiver that receives a required payment from the customer; and

16 a printer that automatically prints the image associated with the desired seat location in
17 response to the payment receiver receiving the required payment.

1 25. (Currently Amended) A computer program product, comprising:

2 (a) a program configured to perform a method of providing souvenir images to event site

3 customers, the method comprising:

4 1) capturing motion video data during an event;

5 2) automatically generating a plurality of images of different event site locations
6 within an event site from said motion video, wherein each image of said plurality of
7 images is associated with a respective one of said event site locations, wherein each
8 said event site location is occupied during said event by a respective discrete subset of
9 said event site customers, each said event site customer occupying only a single
10 respective event site location of said different event site locations;

11 3) receiving, in an automated interactive device, an input from a customer specifying
12 a desired event site location, said receiving step being performed after said step of
13 capturing motion video data;

14 4) responsive to said step of receiving a user input, automatically displaying to the
15 customer in said automated interactive device at least one image associated with the
16 desired event site location; and

17 5) responsive to receiving in said automated interactive device a customer
18 confirmation, automatically providing the at least one image to the customer; and

19 (b) a recordable signal bearing media bearing the program.

1 26. (Previously Presented) The system of claim 24, wherein said automated kiosk further

2 comprises an interactive input device coupled to said display, wherein said automated kiosk

3 displays a subset of said plurality of images, said subset containing multiple images, each image
4 of said subset being associated with the assigned seat location, and wherein said automated kiosk
5 receives from said customer using said interactive input device a selection of one of said multiple
6 images of said subset, said printer automatically printing the selected image responsive to
7 receiving said selection from said customer.

1 27. (Previously Presented) The system of claim 24, wherein said automated kiosk further
2 comprises an interactive input device coupled to said display, wherein said automated kiosk
3 receives from said customer a personalized message using said interactive input device, and
4 wherein responsive to receiving said personalized message, said kiosk automatically prints said
5 personalized message with said image associated with the desired seat location.

1 28. (Previously Presented) The method of claim 1,
2 wherein said step of automatically generating a plurality of images automatically generates,
3 for each said event site location, a subset of said plurality of images, each subset comprising
4 multiple said images;
5 wherein said step of automatically displaying to the customer in said automated interactive
6 device at least one image comprises automatically displaying to the customer in said automated
7 interactive device the subset of said plurality of images associated with the desired event site
8 location;
9 wherein said method further comprises the step of receiving a customer selection of at least
10 one image of said subset of said plurality of images associated with the desired event, said
11 customer selection being received in said automated interactive device, the at least one image
12 selected by said step of receiving a customer selection being automatically provided to the
13 customer by said automatically providing step.

1 29. (Previously Presented) The method of claim 1, further comprising the step of receiving in
2 said automated interactive device a personalized message from said customer, wherein the step of
3 automatically providing the at least one image to the customer automatically provides an image
4 containing said personalized message.
